

A major manufacturing firm serving global industries upgrades its outdated IT infrastructure with significant security improvements.

CASE STUDY

VERTICAL

Manufacturing

SERVICES

- ♦ Cyber Security Bundle
- ♦ Infrastructure Management

CHALLENGE

The manufacturing company, which has been in business for more than six decades, was operating with an end-of-life IT infrastructure, did not have a NextGen antivirus solution in place, and was not working on an intuitive platform. However, the company did not want to make significant capital investments to update and enhance its antiquated IT infrastructure.

SOLUTION

The company was an existing client of a company Thrive acquired, and was not actively searching for a solution. However, the Thrive team of experts noticed a gap in the company's infrastructure and security protocols and leveraged its Energy and Building Management Solution (EBMS) to explore areas that would potentially reduce the firm's Operational Expenditure (OPEX) and Capital Expenditure (CAPEX). Thrive developed a solution that enabled the company to upgrade its infrastructures by showing a cost analysis vs. a CAPEX expenditure. This allowed Thrive to upgrade IT services and add in a security bundle to fortify its infrastructure without any significant capital costs.

RESULT

Since the company was not looking for a solution because of impending costs, Thrive's actions and forward-thinking enabled the firm to remain cutting-edge while protecting its assets with top-notch security measures. The company would have limped along with an obsolete IT infrastructure, increasing its vulnerability to security threats if Thrive had not been able to justify the solution's cost and effectiveness.

How can Thrive help your business?
