

Private Equity Firm selects Thrive to upgrade and secure its IT infrastructure while achieving compliance.

CASE STUDY

VERTICAL

Private Equity

SERVICES

- ◆ ThriveCloud
- ◆ Backup and Disaster Recovery
- ◆ Google to O365 Migration & Management
- ◆ Infrastructure Management and End User Support
- ◆ Patching, Infrastructure & End User Security

CHALLENGE

The private equity (PE) firm was looking for a solution to upgrade its aging IT infrastructure. The wide range of compliance requirements across the many industries that the PE invests in and the ever-changing cyberthreat landscape were difficult obstacles to overcome. The company recognized the need to invest in technology enablement to achieve the growth, scale, and efficiency required for a successful investment lifecycle.

SOLUTION

The PE reached out to Thrive to help drive its business outcomes while protecting investments through digital innovation. The Thrive team of experts has a combined experience of 120+ years serving the financial industry, working with hundreds of PE firms and PE-backed companies. Thrive met with the PE, conducted a full assessment of its IT infrastructure and security, and created a roadmap to accommodate growth. As a result, Thrive implemented ThriveCloud services, backup and disaster recovery services, Google to O365 migration and management, IT infrastructure management, end-user support, patching, and IT infrastructure and end-user security protocols.

RESULT

The newly-deployed suite of IT infrastructure, O365, Cloud, backup, and security services has streamlined the PE firm's day-to-day operations with full visibility into workloads and reporting. The technology advancements and risk mitigation by Thrive allow the PE to focus on growing its business. When the company's end users need assistance, Thrive is there via a help desk and to provide ongoing Office 365 management, IT support and more, ensuring fast communication, case sharing, and resolution of any IT issues.

How can Thrive help your business?

Thrive is a leading provider of outsourced IT Infrastructure designed to drive business outcomes by helping you get the most out of your IT.
