Microsoft provides a wide array of powerful services within Office 365 – but a comprehensive back-up of your Office 365 data is not one of them.

Nimbus Data Recover for Office 365, powered by Veeam®, eliminates the risk of losing access and control over your Office 365 data including Exchange Online, SharePoint Online, OneDrive for Business and Teams. Your data is always available and protected.
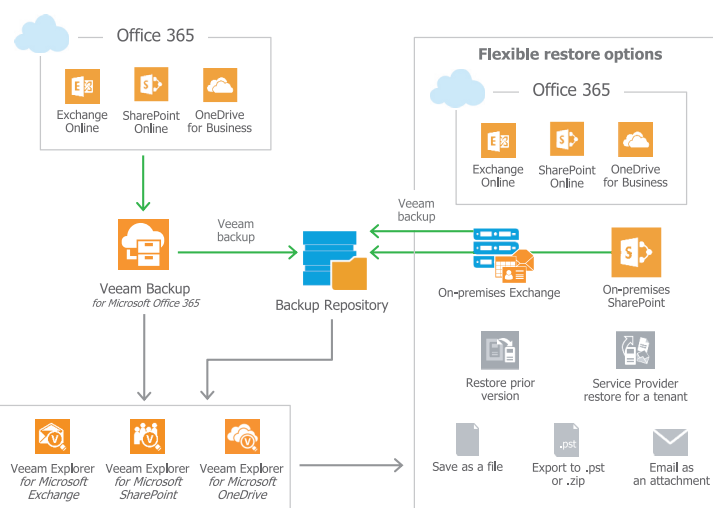

We provide you with an optimally configured O365 Backup Solution. We provide all required Servers, Storage, Veeam and Microsoft licensing as part of this Service. With this solution provided to you out of the box you can be sure that your critical O365 data is backed up to a secure off-site location.

Only you will have access to your O365 data as a service provider we ensure the security of your sensitive data as part of this Service.

WITH OFFICE 365, IT'S YOUR DATA

Microsoft Office 365 enables your organisation to work anywhere, anytime, without the need to host your own email, files and content management infrastructure.

Even though Microsoft hosts the infrastructure, this doesn't replace your responsibility of maintaining a back-up of your business-critical Office 365 data.

DATA PROTECTION FOR ONEDRIVE FOR BUSINESS

Fast, efficient back-up of Office 365 OneDrive for Business accounts with the ability to restore and export files and folders with the new Veeam Explorer™ for Microsoft OneDrive.

You can backup and restore Microsoft teams data with Veeam. When data is posted and shared within Microsoft Teams, it is journaled into different locations, including SharePoint Online. You can use Veeam Explorers™ to find and restore Teams data, including documents and sites.

DATA PROTECTION FOR SHAREPOINT

The ability to back-up SharePoint Online and SharePoint on-premises with fast, flexible recovery of SharePoint sites, documents, libraries and lists with the already-familiar Veeam Explorer for *Microsoft SharePoint* now built-in.

MAJOR EASE-OF-USE AND BACK-UP FLEXIBILITY IMPROVEMENTS

A newly redesigned job wizard to make set-up, search and maintaining visibility into your data easier than ever.

BACK-UP OFFICE 365 TO ANY LOCATION

Hyper-Availability of Office 365 requires secure back-up of SharePoint, OneDrive for Business and Exchange data to another location to mitigate risk and ensure peace-of-mind that you'll be able to restore your users' data when needed.

- Retrieve Office 365 Exchange Online, SharePoint Online and OneDrive for Business data from a cloud-based instance of Office 365. Uniquely back-up the data weekly, daily, or as often as every five minutes in Microsoft's native format – an archive database based on Extensible Storage Engine (ESE), also known as the Jet Blue database.

- Back-up Exchange and SharePoint on-premises utilising the same APIs as Office 365, reducing the impact to your data centre and allowing more frequent back-ups of your users' data.

- Store back-ups in the location of your choice – including on-premises, in a hyperscale public cloud (i.e. Microsoft Azure or Amazon Web Services) or with a local service provider.

- Perform back-ups of unique and localised versions of Office 365, including support for Office 365 Germany and Office 365 China.

RESTORE OFFICE 365 WITH INDUSTRY-LEADING RECOVERY FLEXIBILITY

Never settle for less than reliable, granular restore of Office 365 email items, SharePoint sites, documents, libraries and lists as well as OneDrive for Business accounts, files and folders in a few simple clicks.

- Quick search and granular recovery of individual objects residing in a protected and archived copy of your Office 365 data.

- Direct restoration of Office 365 items through an industry-leading number of ways giving you ultimate restore flexibility.

eDISCOVERY OF OFFICE 365 DATA ARCHIVES

Without an easily-accessible copy of your data, retrieving emails for regulatory or compliance reasons can be costly, time consuming and a major disruption to your business. With Nimbus Data Recover for Office 365, you can leverage the familiar, advanced search capabilities and the flexible recovery and export options to perform eDiscovery on Office 365 archives – just as easily as you would with a traditional on-premises data back-up.

MEET COMPLIANCE REQUIREMENTS

Compliance is a big driver for the need to back-up Office 365.

Store data based on long-term retention policies for regulatory or compliance needs.

Ensure you recover exactly what you need with granular advanced search and find functionality.

EFFICIENTLY SCALE AND MINIMISE OVERHEAD

Unmatched scalability with a multi-repository, multi-tenant architecture, comprehensive automation with full PowerShell and RESTful API support, as well as self-service restore.

UNIFIED ON-PREMISES AND OFFICE 365 BACK-UP

Nimbus Data Recover for Office 365 also allows you to protect hybrid email and SharePoint deployments as well as migrate mailbox data between Office 365 and on-premises Exchange.
