Nimbus Veeam Cloud Connect
## Powerful and Reliable Off-Site Back-Ups of Your Data
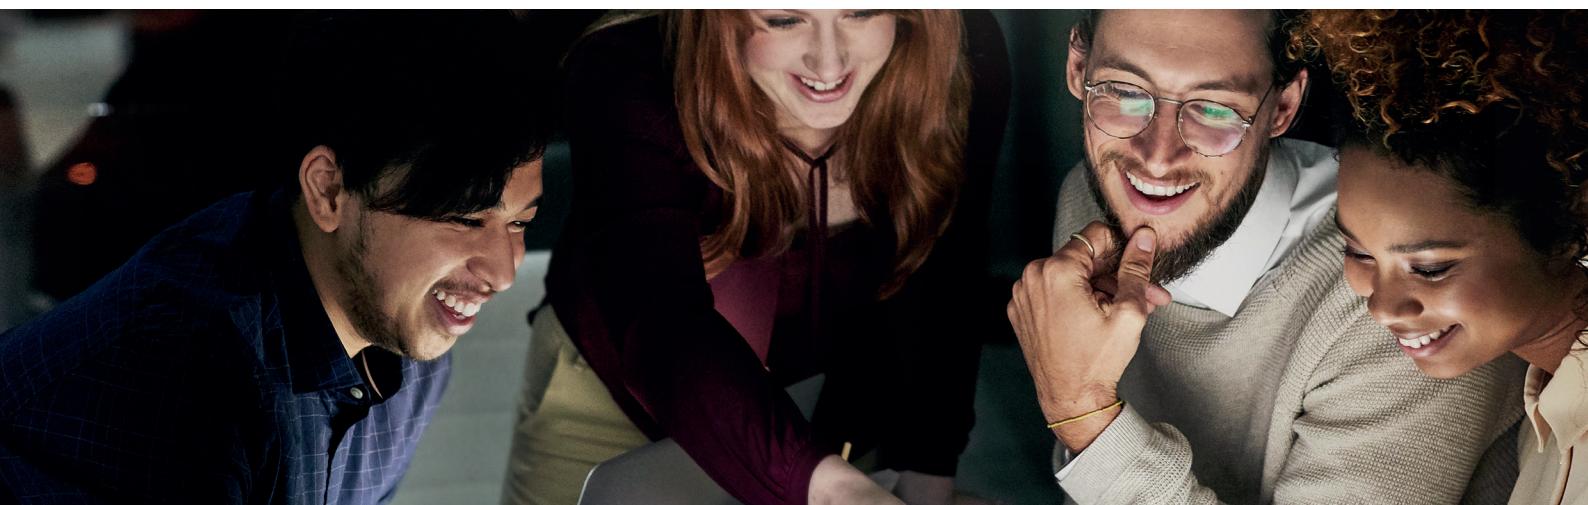

OVERVIEW

Nimbus Veeam Cloud Connect delivers a powerful and reliable off-site back-up of your data, which you can access and manage securely via an online console.

You can mitigate the risk of catastrophic data loss with Thrive's 100% availability service level, benefit from the peace of mind that your data will always remain in the UK and ensure you do not incur any unexpected costs.
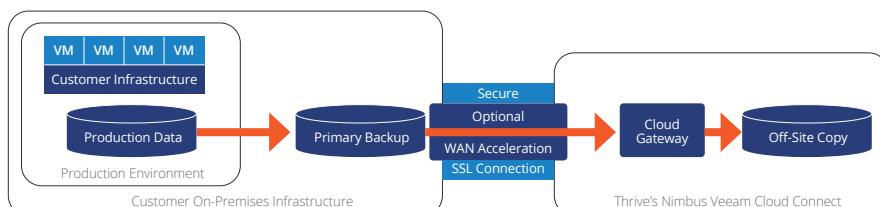

WHY NIMBUS VEEAM CLOUD CONNECT FROM THRIVE?

By implementing Nimbus Veeam Cloud Connect, you can store important back-ups securely off-site with a pricing model that allows you to pay only for what you need, without the requirement of additional licensing.

The flexibility of the solution allows you to adjust your off-site storage requirements as your environment changes, making off-site storage an operational cost.

Nimbus Veeam Connect also avoids the capital expenditure required to support additional infrastructure for an off-site back-up. Instead, your off-site copy is stored in Thrive's UK-based, ISO27001 and Cyber Essentials accredited Tier 3+ data centre that is monitored and manned 24/7.

Access to your data is provided over highly resilient internet connectivity, ensuring continuous availability.

Data sovereignty is guaranteed, there are no egress costs and you have the ability to uplift your service to include disaster recovery, private cloud and public cloud services.

BENEFITS

- Secure off-site storage
- Enhance your existing investment
- 100% availability
- Simple data retrieval
- Seamless integration
- Self-service

USE CASES

Organisations with a requirement for off-site back-ups.

Organisations looking for best of breed secure off-site storage.

Organisations seeking an alternative back-up to solution to cumbersome rotation of tapes or removable media.

Organisations wanting to maximise existing Veeam investments.

SERVICE LEVEL AGREEMENT

Thrive has implemented a robust off-site storage solution that we guarantee access to your data will be 100% available to you 24/7, as though it were an extension of your own workspace.

KEY FEATURES

- **UK-based:** As owner-operator of our Tier 3+ data centre, we know exactly where your data is held.

- **Secure cloud storage:** Get your physical and virtual back-ups off-site to a hosted cloud repository through a secure SSL connection over the internet. Your encrypted data is then transmitted to our dedicated cloud repository.

- **Complete visibility and control:** Access and recover data in cloud repositories directly from the back-up console; track cloud repository consumption and receive reminders for cloud storage renewals.

- **A modern back-up architecture:** Leverage modern back-up technology, including back-up copy jobs with built-in WAN acceleration, forever incremental back-ups, GFS (grandfather-father-son) retention policies and more - all built into one solution.

- **Veeam expertise:** Our staff use Veeam on a daily basis, protecting businesses located across the UK. We support a range of implementations from Cloud Connect, on-premises managed environments with Nimbus Data Recover and our own Nimbus Virtual Cloud Infrastructure-as-a-Service platform.

LOOKING FOR MORE?

For many organisations, Nimbus Veeam Cloud Connect is a starting point for transitioning to the cloud. Thrive offers a range of Back-up, Disaster Recovery and Infrastructure-as-a-Service solutions to our customers.

THE 3-2-1 RULE

3 Copies of Data	→	2 Different Media	→	1 Off-Site

The 3-2-1 rule states that you need to keep three copies of your data, stored on two different media, with one copy being off-site.

Getting back-ups off site can be challenging due to limited bandwidth, exploding data volumes and limited resources to build and maintain an effective off-site back-up solution.

With Nimbus Veeam Cloud Connect, you can master the 3-2-1 rule without the cost and resource requirements of a second site or additional bandwidth.

HOW ARE YOU ADDRESSING YOUR BACK-UP SECURITY CONCERNS?

End-to-end encryption: Rest easy by encrypting all data at source, in flight and at rest, without negatively impacting the data reduction ratios of built-in compression and WAN acceleration.

INDUSTRY STANDARD BEST PRACTICES

Thrive adhere to ISO27001, BS10012 and are Cyber Essentials accredited, giving you peace of mind that your data is in safe hands.
