- ◆ End-User Security Bundle
- ◆ Managed SIEMaaS with Security Monitoring
- ◆ Vulnerability Management

CHALLENGE

A new financial firm was managing a large amount of capital at its family office and needed to ensure it had top-notch cybersecurity and IT network solutions in place. The firm was looking to partner with a managed service company that had extensive experience in the financial sector.

SOLUTION

After an extensive search, the firm decided Thrive was the best fit because of its cybersecurity offerings and Virtual Desktop services, which provided flexibility to scale quickly with new hires. Thrive implemented several solutions that met a wide range of stringent compliance requirements while also protecting the firm with cutting-edge cybersecurity measures. This included Security Incident and Event Management as a Service (SIEMaaS) with Security Monitoring, a fully managed and hosted IT infrastructure monitoring platform that provides real-time context and intelligence alerts for a complete threat assessment. The Thrive team also delivered these solutions: Managed IT/Network, End-User Support, End-User Security Bundle and Vulnerability Management.

RESULT

The firm's enhanced management and cybersecurity safeguards from Thrive have instilled stronger confidence from current and prospective investors. The Thrive team worked tirelessly to ensure the Virtual Desktop solution was launched in just three weeks. The firm is extremely pleased with the solutions and has already referred other family financial offices to Thrive.

How can Thrive help your business?

Thrive is a leading provider of outsourced IT Infrastructure designed to drive business outcomes by helping you get the most out of your IT.
