

CASE STUDY

A growing construction company scales and automates its IT infrastructure with Thrive

CHALLENGE

The company, one of the largest construction companies in the U.S., has gone through significant growth and needed a provider that could help it scale and automate the onboarding and offboarding process of adding and removing employees.

SOLUTION

The construction company evaluated providers of all sizes, and Thrive stood out due to the ability to scale and drive automation with a comprehensive IT strategy. Thrive's team of experts successfully built ServiceNow automation to assist the construction company with aggressive growth requirements. Thrive's Cloud-based client portal, powered by ServiceNow, provides a real-time view of its network and can create, route, and close IT support requests directly through the platform. In addition, Thrive implemented ThriveCloud, which powers an Enterprise-class Cloud infrastructure with optimal performance, security and efficiency. Disaster Recovery, Managed Backup, a Microsoft strategy and End User Support were also deployed.

RESULT

As a result of the Thrive partnership, the construction company now has a custom, robust platform that allows it to scale business in any market with automation and confidence in cost control.
