

CASE STUDY

A life safety architecture and consulting firm selected Thrive to design and manage its IT infrastructure to accommodate growth.

CHALLENGE

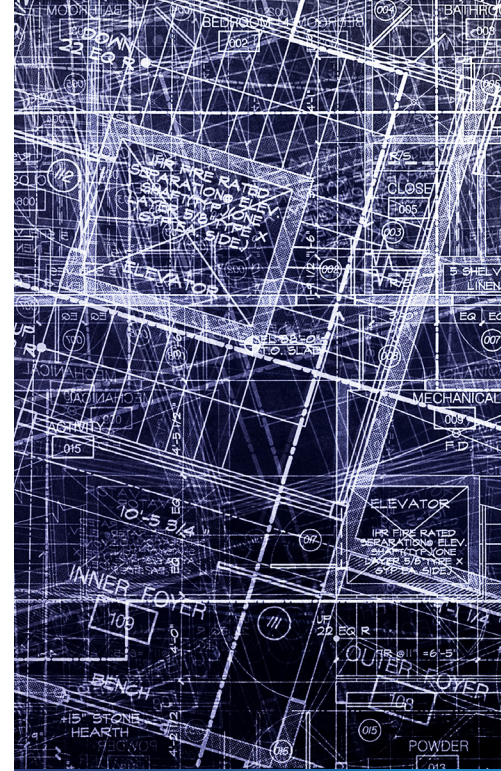

The life safety architecture and consulting firm, which focuses on life safety, including building and fire code consulting, life safety master planning, fire protection and life safety design and construction, was unhappy with its current IT managed services provider (MSP). The firm was experiencing rapid growth, but the MSP couldn't provide a platform to scale with its expansion. In addition, the company felt the MSP was not proactive in managing its IT needs.

SOLUTION

The firm selected Thrive because of our ability to provide a wide range of custom IT services, eliminating the need to use multiple vendors. Thrive delivered a robust portfolio to fortify and grow the firm's IT operations, including End User Security, Managed Network Operations and Security, Managed Azure, End User Support and 24x7 Technical Advisory Services.

RESULT

Thrive created workflow efficiencies by consolidating the firm's IT and Cybersecurity vendors into one entity. The preexisting MSP provider created challenges during the handoff to Thrive. However, the company applauded Thrive for being flexible in making a seamless transition and onboarding process.

Architecture & Planning

Services

- End User Security
- Managed Network
- Managed Azure
- Virtual Chief Information Officer (vCIO) Services
- End User Support
- Technical Advisory Services
