

CASE STUDY

A car dealership with multiple locations selects Thrive to scale, secure and manage its IT infrastructure.

CHALLENGE

A California-based automotive dealership with three locations, required the replacement of end-of-life firewalls and sought to transition from its current MSP due to support issues. With a small IT team, the dealership needed comprehensive services, including hardware, licensing and 24x7x365 firewall management. The ideal MSP/MSSP would offer white-glove support, collaborate with its circuit and bandwidth provider, and provide scalability, enabling the internal IT staff to focus on strategic technology initiatives.

SOLUTION

The dealership considered other vendors but selected Thrive because of our scalable and end-to-end cybersecurity and Cloud solutions, a remarkable customer support and success track record, along with 24x7x365 eyes-on-glass Security Operations Center (SOC). Thrive implemented Managed EBMS servers, Managed Fortinet firewalls, including web filtering, protection service and Managed Secure SDWAN service. In addition, the Thrive team deployed Managed ISP services, a ISPEC site-to-site VPN tunnel and remote access VPN service.

RESULT

Thrive's expert solution transformed the dealership's IT landscape. Seamlessly transitioning from outdated firewalls to a robust infrastructure heightened its security with solutions including Managed Fortinet firewalls and Managed Secure SD-WAN services. In addition, the 24x7x365 Security Operations Center vigilantly safeguards against potential threats. Thrive's white-glove support and collaboration with the circuit and bandwidth provider allow the internal IT team to concentrate on strategic initiatives. Thrive enabled the dealership to operate confidently, unburdened by IT security concerns and poised for continued growth.
