## SERVICES

- ◆ Private Cloud Infrastructure-as-a-Service (IaaS) solution
- ◆ Backup and Disaster Recovery
- ◆ 100% uptime
- ◆ Flexible, scalable storage
- ◆ Round-the-clock monitoring and proactive maintenance
- ◆ Instant service provision and scalability

## CHALLENGE

The company, which offered online booking, service management, and online learning, was looking to migrate its IT services to the private Cloud. While some solutions weren't Cloud-ready, the company needed a partner that had expertise across both the Cloud and on-premises environments and could deploy a phased migration of systems while ensuring minimal disruption to the services that its customers depend on.

## SOLUTION

Thrive migrated the company's infrastructure to Thrive's secure, private Cloud based in Luton, UK with its private Cloud Infrastructure-as-a-Service (IaaS) solution. Next, Thrive implemented a Cloud backup service with full disaster recovery to ensure business continuity. With a pending office move, the company also wanted to co-locate a separate business within the same Cloud. Thrive provided the same Cloud service with off-site backup and disaster recovery capability to ensure site redundancy. This migration of hardware to the Thrive facility paved the way to the full migration to an IaaS solution and operation within a virtualised environment.

## RESULT

Thrive's professionally-managed Cloud environment gives the company and its customers the peace of mind that services are secure and always available with 100% uptime. In addition, Thrive's support from on-premises to co-location to fully managed IaaS has delivered IT agility that enables the company to respond, adapt and evolve to business needs. As a Thrive Managed Services Cloud partner, the company is supported at every step of its journey with the flexibility to move at its pace.

## How can Thrive help your business?

Thrive is a leading provider of outsourced IT Infrastructure designed to drive business outcomes by helping you get the most out of your IT.
